**DETAILED ACTION**

***Response to Remarks***

1. The applicant has amended the claims to overcome the 101 rejection set forth in the previous office action.
2. Claims 1-15 and claims 19-20 are cancelled.
3. The remaining claims are in allowable form.

***Allowable Subject Matter***

4. Claims 16-18,21-33 are allowed.
5. The following is an examiner's statement of reasons for allowance:  
Regarding claims 16,17,21 and 23, Dobbs discloses a device for setting an audio output level (Figure 1) comprising:

a storage unit operable to store a plurality of thresholds associated with clock time information preliminarily (memory, Figure 1; column 3, lines 43-48 teaches of inputting a data set into memory, the data set comprising an activating time of day and stored variable attenuation parameters; column 2, lines 45-column 3, line15; column 8, line 63- column 9, line 65);

a selecting unit operable to select one of the plurality of thresholds corresponding to a current clock time (rotary encoder 16, Figure 1; column 7,line 48- column 8, line 16; step 206, column 7, lines 65-column 8, line 6, the user selects an equalization profile associated with an audio source, the equalization profile having an associated time of day and implicitly a threshold);

and a requesting unit operable to request an acknowledgment that a setting of the audio output level is to be changed (rotary encoder 16; column 8, lines 24-28 teaches that the user can rotate the rotary encoder 16, which provides the user with the option of choosing yes or not to decide if he or she wishes to redo or change an equalization settings)

and allocating a function of replying to the acknowledgement for a certain period of time immediately after requesting the acknowledgement to an operation button and that the operation button is on at least one of a remote control and a main unit (column 8, lines 24-28; rotary encoder 16 is pushed to acknowledge yes when the user wants to make changes; Dobbs teaches that user input can be provided by rotary encoder 16 or IR transmitter (18) which reads on remote column 4, lines 34-36)column 8, lines 8-25; rotary encoder is pushed).

Prior art Elliot discloses modifying the setting when the setting exceeds a threshold (column 2, lines 10-19). Prior art Chaudhri discloses ending the setting of the audio output level after the certain period of time expires, if a reply via the operation button is not received (column 7, lines 38-43).

Regarding claims 16 and 17, the prior art or combination thereof fails to disclose or make obvious "setting, in a setting unit, the audio output level to the setting that exceeds the selected threshold, if the reply via the operation button is received, and setting, in the setting unit, the audio output level to the selected threshold , if a reply via the operation button is not received by expiration of the certain time period.

Regarding claims 21 and 23, the prior art or combination thereof fails to disclose or make obvious "a setting unit operable to set the audio output level to the setting that exceeds the selected threshold, if the reply via the operation button is received, and set the audio output level to the selected threshold , if a reply via the operation button is not received by expiration of the certain time period.

Claims 18,22,24-33 are allowed due to dependency on claims 21 and 23.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
